

EASY LETTERS

Fitting Instructions

Easy Letters are designed to make fitting as easy as possible, wherever you fit them

Tape the Layout Plan on to the wall or board EXACTLY where you want to position the letters but only tape it along the top edge for now so you can adjust the position and lift it up and look underneath it.

Make sure the letters are level, ideally by using a spirit level and correct the position of the Layout Plan until perfect

The small holes on the Layout Plan show where the screws must be fixed to match the fittings on the letters. This is a good time to check that you will be able to drill all the holes in the wall without the drill spinning off the edge of bricks or hitting other obstacles.

When you are happy all is okay, tape all 4 sides of the Layout Plan to the wall making sure it is stretched tightly

Mark the hole centres in the wall with a punch or pilot drill in the EXACT position of the small dots on the layout plan

Remove the layout plan, drill the holes in the wall or board EXACTLY in the positions you have marked and attach the fittings to the wall

This is a good time to clean the wall while you still can!

Finally, clip the letters on to the fittings, stand back and admire your new lettering

As we said - Easy!
